

NUR RAHMAN SHALAHUDIN

DATA ANALYST | BUSINESS INTELLIGENCE | PREDICTIVE ANALYTICS

Depok, Indonesia | nrahmanshalahudin@gmail.com | +62 812-9465-2263

Portfolio: [nrshalahudin.vercel.app](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL PROFILE

Data analyst who turns messy transaction histories into sales decisions. Across B2B distribution, F&B and CRM work, I have used Python and SQL to find concentration, churn and cross-sell risk, then delivered ranked account lists, dashboards and forecasts. Seven years in ISO/ASTM laboratory quality control shaped how I validate every number.

TECHNICAL STRENGTHS

Analytics: Python, Pandas, NumPy, scikit-learn, statsmodels, SQL/PostgreSQL, RFM, K-Means, 24-month CLTV, Logistic Regression, Random Forest, XGBoost, ARIMA/Prophet, record linkage. **Delivery:** Looker Studio, n8n, Firebase/Express, Git/GitHub.

SELECTED ANALYTICS PROJECTS

B2B customer segmentation and CLTV | PT Gagas Envirotek | 2026 [Code](#) | [Deck](#)

Project Overview. Client analysis of 2020-2025 laboratory-equipment purchase orders to prioritize accounts and product opportunities for sales.

Problem. Sales treated 314 accounts alike despite wide differences in order value, recency and product mix.

Built. Cleaned 1,575 purchase orders (Rp 32.66B, 2020-2025); combined RFM, 24-month CLTV and K-Means with an opportunity matrix and Looker Studio dashboard.

Impact. 71 loyal accounts (22.6%) generated Rp 25.76B (78.9%) of revenue. Sales gained ranked account-product and retention lists in place of an undifferentiated export.

B2B predictive growth and revenue simulation | PT Gagas Envirotek | 2026 [Code](#) | [Deck](#)

Project Overview. A follow-on engagement for the same client, extending the segmentation baseline into cross-sell, retention and planning scenarios.

Problem. Instruments produced 84.8% of revenue, while leadership lacked a way to identify credible cross-sell and repeat-purchase targets.

Built. Trained product-type and cross-sell classifiers, a 180-day retention model, and ARIMA/Prophet forecasts; tested revenue scenarios against the annual plan.

Impact. The cross-sell model reached 0.97 holdout AUC; 73.6% of accounts scored high churn risk. A roughly Rp 5.57B 2026 forecast gave planning a quantified baseline, not a realized sales figure.

11-year revenue concentration diagnosis | PT Andaru Persada Mandiri | 2026 [Code](#) | [Deck](#)

Project Overview. A separate client study of two purchase-order ledgers spanning 2013-2023, focused on long-run sales volatility and account concentration.

Problem. Annual sales swung sharply, but two incompatible historical ledgers obscured whether the risk was recent or structural.

Built. Reconciled 2013-2017 and 2018-2023 purchase-order data, decomposed yearly growth and compared customer segments across periods.

Impact. In 2013-2017, 24 accounts held 58.5% of revenue; later year-on-year changes ranged from +250% to -67%. The analysis supported a protect-core, convert-middle and diversify plan.

Sales market mapping and CRM audit | PT Andis | Dec 2025-Jan 2026 [Code](#)

Project Overview. A sales-data quality and market-coverage assignment using the client's company and contact records.

Problem. CRM records were useful for data entry but too inconsistent for sales to see coverage, duplicates or priority segments.

Built. Audited and standardized company, contact, segment and region fields; mapped market coverage and built a dashboard v1 for stakeholder review.

Impact. The audit and integration were completed by week 2; dashboard v1 reached stakeholder review in week 3, giving sales a shared view of coverage and follow-up priorities.

SELECTED ANALYTICS PROJECTS

F&B churn and revenue forecasting | 2024 case study [Code](#) | [Deck](#)

Project Overview. An unnamed 2024 F&B case on customer retention and sales trends.

Problem. The business had transaction data but no cadence-based definition of churn or reliable view of near-term revenue.

Built. Consolidated 2,430 transactions; scored RFM, clustered customers, estimated CLTV and modeled monthly revenue with Prophet.

Impact. Measured 29% churn and 3.45 months of average customer lifetime, shifting the recommendation toward high-value customer retention.

Dapil 7 voter data reconciliation | 2024 campaign [Code](#) | [Deck](#)

Project Overview. A 2024 campaign data project spanning five kecamatan and 34 kelurahan in Dapil 7.

Problem. The field list held 15,156 raw rows, while KPU voter data was fragmented across 3,830 TPS-level PDFs with inconsistent headers and location values.

Built. Standardized voter extracts and prepared 14,021 SQL-ready rows; ran a strict name, RT, RW and age match by area, audited residuals with FULL OUTER JOIN, then retried reviewed rows on name, RT and RW.

Impact. Delivered area- and TPS-organized matched outputs enriched with voter demographics and contact fields for campaign coordinators.

Bank UNO marketing targets | Rakamin team final project [Code](#)

Project Overview. A Rakamin Batch 38 UNO team case on bank term-deposit targeting.

Problem. Only 11.7% of 45,211 bank-marketing records showed term-deposit subscriptions against a 15% business target.

Built. As a UNO team member, explored customer and campaign patterns, prepared features and compared classifiers; the team selected XGBoost for its test performance.

Impact. The analysis identified segments and contact patterns for campaign focus; UNO received the Runner-Up Best Final Project Team award. The 15% figure was a target, not an achieved conversion rate.

PROFESSIONAL TIMELINE

Sleyd AI | Founder and automation engineer | 2026-present [Open](#)

Project Overview. A solo-built live SaaS turning text, documents and voice into shareable presentations. Built five n8n workflows (~68 nodes), an Express/Firebase backend, a four-model fallback chain and a 15-minute stalled-job recovery path.

PT Pertamina Lubricants | Laboratory quality control analyst | 2016-2023

Performed physical and chemical testing under ISO/ASTM methods. Standardized calibration and QA procedures, contributing to a 15% reduction in testing defects and Best Employee recognition in 2021.

EDUCATION AND CREDENTIALS

Rakamin Academy | Data Science Batch 38 | Sep 2023-Feb 2024

Final score 87.74/100 (Excellent); Runner-Up Best Final Project Team (UNO). Curriculum: data science foundations, SQL, Python, data processing, visualization, statistics, Git, business understanding, supervised and unsupervised machine learning, plus deep-learning fundamentals.

Final project - Bank UNO Marketing Targets: as a team member, completed EDA, preprocessing, encoding, scaling and SMOTE; compared Logistic Regression, Decision Tree, Random Forest, AdaBoost and XGBoost. Tuned XGBoost reached 0.92 test AUC, 0.72 F1 and 0.90 accuracy on the project test set.

STAI Al-Hikmah Jakarta | Bachelor's, Islamic Communication & Broadcasting | 2020-2024

Politeknik AKA Bogor | Diploma, Chemical Analysis | 2012-2015

Additional credentials: Google Data Analytics (Coursera); Certified Lubricant Analyst (PPSDM Migas Cepu).
